

The Mortar & Pestle:

MD Custom Rx's monthly e-newsletter

November 2017

Greetings!

At MD Custom Rx, we care about our patients and want to provide you with quality information about your health. If you ever have questions or would like more information, please feel free to ask. We look forward to caring for you and your family.

Sincerely,
Dan, Monica and John

Recurrent Urinary Tract Infections in Postmenopausal Women

As estrogen levels decline in postmenopausal women, lots of unpleasant things can happen:

- Vaginal atrophy (thinning, drying and inflammation of the vaginal walls due to decreased estrogen levels)
- Cystitis (bladder inflammation)
- Changes in urinary frequency, urgency and incontinence
- Recurrent urinary tract infections

Recurrent urinary tract infection (RUTI) is defined as three episodes of urinary tract infection (UTI) in the previous 12 months or two episodes in the last six months. RUTI and cystitis are common in postmenopausal women because falling estrogen levels affect the lining of the bladder, predisposing them to urinary tract infections. These women suffer a significant deterioration of their social, sexual and work activities. But there is help! A review of nine studies with a total of 3345 women found that treatment with vaginal estrogens reduced the number of UTIs. Estrogens administered vaginally as inserts or creams can also relieve common symptoms of vulvovaginal atrophy.

Non-hormonal substances have been shown to help prevent or reduce the frequency of UTIs:

- One study found that the oral combination of hyaluronic acid and chondroitin sulfate (substances that strengthen bladder defense mechanisms), enhanced by the antioxidant properties of curcumin and quercetin, was effective in preventing recurrent urinary tract infections, especially if administered with vaginal estrogen therapy.
- In female breast cancer survivors affected by genitourinary discomfort, the combination of N-acetylcysteine, D-mannose and Morinda citrifolia (noni) with antibiotic therapy was more effective in reducing urinary tract infections and urinary discomfort than antibiotics alone.

We encourage postmenopausal women with recurrent urinary tract infections to talk to our pharmacist and their doctors about treatment options. We'll be happy to discuss any concerns, and work with your doctor to formulate medications that will meet your specific needs.
